"Working with Damien was transformative for my career, and I continue to use the tools he helped me develop daily."

Kathryn Hamilton, PhD  
Assistant Professor of Pediatrics  
University of Pennsylvania Perelman  
School of Medicine

"EDC was instrumental in the hiring of my first technician and in negotiating with my hiring institution and with vendors".

Anupama Narla, M.D.  
Assistant Professor of Pediatrics &  
Stanford University School of  
Medicine

"EDC's expertise saved me a huge amount of time and also reduced my stress levels considerably."

Ann Mullally, M.D.  
Assistant Professor, Harvard  
Medical School

"He (Damien Wilpitz, CEO) helped me negotiate a great packages from multiple institutions. Once that was done, he helped me set up the lab, hire and train a lab manager, and create an environment where things run smoothly and I can focus on the science. I'm not sure how I could have done all of this without him."

Amir Zarrinpar, M.D., Ph.D.,  
Associate Professor, Gastrointestinal Biology  
University of California, San Diego

"EDC has also given me valuable advice to help with managing the people in my lab. With Damien's help, my lab was operational much sooner than I expected. Since most new PIs are well-trained to do science but have essentially no training in lab management, I really don't know how anyone can effectively start a new lab without Damien's guidance."

Kira Gritsman, M.D., Ph.D.  
Assistant Professor,  
Albert Einstein College of Medicine

"Budgets are important, but as a PI, time is most valuable asset. Getting things done efficiently the first time is critical to becoming a productive research lab and well worth the upfront investment in professional guidance. The only thing better than hiring Damien/EDC would have been to convince him to join my lab"

Rafael Bejar, M.D., Ph.D.  
Assistant Professor of Medicine  
UCSD, Moores Cancer Center

"From personal training to all of the logistics, EDC is an essential component of my group. You have to tap this amazing resource and start rethinking what it takes to set up, run, and maintain a successful laboratory group."

Michael Kharas, Ph.D.  
Assistant Member of Molecular  
Pharmacology & Chemistry  
Memorial Sloan-Kettering Cancer  
Center
